Designing for People with Dementia

A six-hour workshop on designing dementia friendly aged and health care facilities
Facilitated by Terri Preece and Tara Quirke

Research has identified that environmental factors can have a significant impact on our ability to live well, and are one major cause of changed behaviour in a person living with dementia.

Dementia Training Australia is offering this workshop to provide aged and health care facilities with the knowledge, resources and tools required to:

⇒ enable staff and managers to understand the effects of the built environment on the person living with dementia
⇒ modify the environment so that it assists them to deliver care which promotes wellbeing while reducing confusion and depression.

This workshop:

• Looks at ways that the built environment can support people living with dementia in acute and residential aged care settings, using examples and a case study
• Introduces audit tools
• Helps participants apply key design principles in particular settings.

Event Details

Cost: Fully funded by the Australian Government
Date: Friday 17 November 2017
Time: 9.30am to 3.30pm
Location: To be confirmed on registration
Gold Coast, QLD
